Professional Summary

Applied AI/ML Engineer with 3+ years taking ML and GenAI systems from prototype to production, including 1.5+ years building agentic systems (multi-step agent workflows, MCP servers/clients, retrieval pipelines over enterprise data). Combines classical ML (time-series forecasting, gradient-boosted trees) with LLM fine-tuning, inference optimization, and metric-driven evaluation; has led a 5-member AI team.

Education

Indian Institute of Science Education and Research (IISER) Kolkata — Kolkata, WB
BS-MS Dual Degree (Integrated Master of Science) in Geological Sciences, Minor in Physics — *Aug. 2017 – July 2022*

- Coursework: Linear Algebra, Probability, Programming & Data Structures. Master's thesis: statistical modeling and risk-index analysis of heavy-metal contamination.

Experience

Data Engineer (AI Infra) — April 2026 – Present
Recruiterflow — *Bangalore, KA*

- Designed and implemented the Recruiterflow MCP server with a dedicated logging pipeline, exposing real-time recruiting and CRM data as agent tools in Claude for 2,100+ search firms globally, with per-call logs supporting traceability and auditing.
- Architected the Natural Language Search (NLS) data pipeline, processing 200K+ candidates/contacts and 10K+ jobs and deals per day to power LLM-driven search.
- Revamped Omni-Search indexing and retrieval on OpenSearch with a scheduled ingestion pipeline for candidate profiles; consolidated per-tenant indexes into shared ones, improving scalability, reliability, and cluster health.
- Migrated the company-enrichment pipeline off a legacy system, adding caching and request optimizations that cut Crustdata API costs by over 2.5×.
- **Tech Stack:** Python, MCP, OpenSearch, Elasticsearch, Redis, Celery, AWS (SQS, ECS, ECR, RDS), Gemini API, SQL, Flask, CI/CD

Machine Learning Engineer — March 2025 – April 2026
Kloudspot — *Bangalore, KA*

- Led end-to-end design of LISA AI, an enterprise AI assistant, owning data models, ML pipelines, and agent-based workflows; managed and mentored a 5-member AI team delivering production systems.
- Built agentic workflows and graph-based reasoning modules, plus an MCP client connecting agents to enterprise data sources and tools, enabling structured, interpretable decision pipelines over enterprise data.
- Ran large-scale benchmarks of inference strategies and latency–throughput trade-offs; tuned vLLM/SGLang with EAGLE-3 speculative decoding on RTX-4090s for up to 2× throughput and 2.7–3.5× lower latency under high-concurrency load.
- Instruction fine-tuned open-source LLMs (Llama 3.1, Qwen, DeepSeek) for reasoning and retrieval-augmented tasks.
- **Tech Stack:** Python, PyTorch, LangGraph, MCP, vLLM, SGLang, SFT, FastAPI, MongoDB, Docker

Associate Data Scientist — Nov. 2023 – Feb. 2025
Celebal Technologies — *Jaipur, RJ*

- Built energy demand forecasting models using ARIMA/SARIMA and tree-based models (XGBoost, LightGBM, CatBoost), with K-Means segmentation; achieved R^2 of 0.752 for electricity load prediction.
- Led design and deployment of Azure OpenAI and Document Intelligence solutions to extract, embed, and index structured/unstructured documents, improving BLEU by 15% and semantic similarity by 10%; secured with Azure AD auth, APIM, and API versioning for enterprise compliance.
- Built an on-premise OCR and table-extraction pipeline by fine-tuning open-source models (Table Transformer, Tesseract, LayoutParser, Detectron2) and serving via ONNX Runtime.
- Designed a hybrid VLM inference system (quantized fine-tuned model on edge, full model on cloud) with adaptive edge–cloud routing for real-time video analytics, plus data-prep, tagging, and retraining modules; reached 77.9% mAP (YOLO11, QLoRA, SmolVLM).

Data Science Intern — June 2023 – Oct. 2023
Celebal Technologies — *Jaipur, RJ*

- Fine-tuned GPT-3.5-turbo and Mistral 7B for text-to-query generation (SQL, NoSQL, MongoDB), validated against ground-truth results with DataCompy scores above 95%.
- Improved a RAG pipeline for tabular data, raising search-result accuracy from 60% to 85%; added chat-history persistence and a logging pipeline on Azure Cosmos DB.

Technical Skills

Languages: Python, SQL, C++, C, JavaScript, TypeScript
Agentic & GenAI: LangGraph, LangChain, LlamaIndex, MCP, RAG, vLLM, SGLang, Speculative Decoding, SFT, PEFT/QLoRA, Transformers
Classical ML & Stats: Time-Series Forecasting (ARIMA, SARIMA), XGBoost, LightGBM, CatBoost, Regression, Clustering
Data & Serving: PySpark, Databricks, Pandas, NumPy, OpenSearch, Celery, AWS SQS, FastAPI, Flask, gRPC, Docker, CI/CD
Cloud & Databases: AWS, Azure, Cloudflare Workers; PostgreSQL, MySQL, MongoDB, Redis, Azure Cosmos DB

Certifications

Microsoft: Azure Data Scientist Associate | **Azure AI Engineer Associate** | **Databricks: Generative AI Engineer Associate**
